

**APPENDIX 9**

**DEPLETION TABLE BY SELECTED DRAINAGE**

NET DEPLETION TABLE BY SELECTED DRAINAGE

<u>TYPE OF USE</u>	<u>PERCENT DEPLETION</u>
<u>1. Beaver Creek Drainage<sup>1/</sup></u>	
a. Snowmaking	12%
b. Golf Course	80%
c. Commercial Uses	67%
d. Mining	50%
e. Volcanic Bedrock Aquifer Uses <sup>2/</sup>	Not Applicable
<u>2. Upper Big Sandy Creek Drainage<sup>3/</sup></u>	
a. Irrigation	67%

NOTES:

1. The Tribe is limited to 260 AF/year of net depletion in the Beaver Creek drainage, exclusive of exempted uses. Percent depletion reflects what percent of the diversion volume, for a specific use, must be counted against the net depletion cap.
2. Uses from the volcanic bedrock aquifer system are not to be counted against the 260 AF/year depletion limitation in the Beaver Creek drainage.
3. In the Upper Big Sandy Creek drainage, 67 percent of the volume diverted for irrigation is counted as a net depletion to the water system.
